SUMMARY

Dedicated and proactive B.Tech student in cybersecurity with strong practical experience in networking, server management, and Linux systems. Committed to utilizing technical expertise and analytical skills to support IT operations while advancing toward becoming a proficient cybersecurity professional.

EDUCATION

Bachelor of Computer Engineering

Institute of Advanced Research
2022-2026

SKILLS

- Network systems configurations and support
- Authentication and Authorization
- Network monitoring and diagnostic
- Wireless networks technologies
- Storage and backup management
- Remote troubleshooting
- LAN,WAN technologies
- SIEM & EDR (Wazuh)
- Endpoint threat detection & log analysis
- SOC monitoring & incident response
- Linux administration (Ubuntu, Kali)
- Security event investigation & alerting

CERTIFICATION

- Telstra Cybersecurity Job Simulation—Forage
- JPMorgan Cybersecurity Job Simulation—Forage
- Mastercard Cybersecurity Job Simulation—Forage
- [Foundations of Cybersecurity—Google \(Coursera\)](#)
- [Cybersecurity Assessment: CompTIA Security+&CYSA+—IBM \(Coursera\)](#)
- Emerging Technology—SAP

TOOLS AND TECHNIQUES

- Hardware: Switches, Routers, Firewalls, Servers
- Software: nslookup, ipconfig, netstat, Packet Tracer, VMWare.
- Routing Protocols: Static Routing, BGP, OSPF, EIGRP, RIP, NAT,
- Switching Technologies: STP, EtherChannel, Trunking, Port Security, VLANs
- Networking Protocols & Standards: DSL/VPN, TCP/IP, UDP, IPv4, IPv6, SMTP, SSH, FTP, HTTP, HTTPS, DNS, DHCP, PKI, TLS, QoS (Traffic Shaping), IPsec Tunnels, SSL VPNs
- Frameworks & Layers: OSI Model (Layers 1-7)
- Programming Languages: Python, C, C++
- Operating System: Kali Linux
- Security Skill: OSINT, OWASP Top 10, Red Team Basics, Malware Analysis (Basic), Social Engineering, DDoS, Spoofing, Brute Force, Network Scanning

EXPERIENCE

VAPT Analyst (ASM) | Tribastion Technologies | Jul 2026 – Present

- Conduct VAPT of web applications and external attack surfaces.
- Perform ASM to identify exposed domains, subdomains, services, ports, and technologies.
- Perform reconnaissance and security testing using Burp Suite, Nmap, WhatWeb, and Gobuster.
- Identify, validate, and assess vulnerabilities and their security impact.
- Document findings with evidence, risk ratings, and remediation recommendations.

Cybersecurity Intern | Infotact Solutions | Remote | 3-Month

- Built a complete SOC environment using Wazuh (SIEM + EDR) to monitor, detect, and respond to endpoint threats in real time.
- Configured a multi-node log pipeline (Wazuh Agent → Manager → Filebeat → Indexer) and simulated attacks using Kali Linux.
- Analyzed and investigated live security alerts via the Wazuh Dashboard, gaining hands-on SOC analyst experience.

System Administrator Intern | TechMonarch | 3-Month

- Assisted in firewall configuration and security monitoring.
- Monitored systems using Tactical RMM and handled alerts.
- Administered Microsoft 365 (users, licenses, email, security).
- Managed Active Directory (users, groups, permissions).
- Performed server backup, storage monitoring, and health checks.
- Resolved client tickets and provided remote technical support.

PROJECT

Adaptive Packet Routing with Q-Learning :

- Keywords: Python, Q-Learning, NetworkX, NumPy, Matplotlib, Seaborn, Collections
- Developed an intelligent packet routing system using Q-Learning to find the optimal path in a dynamic network. Network topology was created using NetworkX, and routing decisions were improved based on delay and congestion. Performance was analyzed using NumPy, Matplotlib, and Seaborn.

AI-Powered Intrusion Detection & Prevention System (IDS/IPS) integrated with a SIEM dashboard :

- Keywords: Suricata, Zeek, Filebeat, Logstash, Elasticsearch, Kibana, EveBox, Python, FastAPI, scikit-learn, Docker, GeoIP, iptables, Ubuntu
- Built an AI-based IDS/IPS integrated with SIEM to monitor network traffic in real time. Used Suricata & Zeek for detection, ELK Stack (Elasticsearch, Logstash, Kibana) for log analysis, and Machine Learning for attack detection. Implemented automatic blocking using iptables and visualized alerts in Kibana dashboard.
